For individual **FOCUSED** work at home

planning for a **REMOTE WORKFORCE**

The number of employees working from home has surged over the past several years, with the largest jump following the mandated social distancing guidelines of 2020. As the nature of work trends towards a flexible work environment that includes work-from-home hours, a company should set goals for a “work-from-home system” that sets up their employees for success. That includes equipping them with the essentials needed for a productive at-home work environment.

Offices-To-Go Height-Adjustable Table and Mesh Synchro-Tilter; Magnuson Group Runda

WORKER well-being

The first step is communicating the need for dependable furniture that can support the hours of use required in a home office. With face-to-face collaboration being substituted with virtual online meetings, employees may be spending many hours seated at their desks with eyes focused on screens. The ultimate home work environment considers more than space and aesthetics and addresses these important ergonomic needs.

We have programs available to empower employers and employees to select at-home products that are of the same caliber of product found in high-traffic office environments. Many programs allow for direct ship to the user, and in some cases a quick ship option for immediate needs.

Offices-To-Go Fixed Table, Luxhide Chair, and Storage; Global Citi Square; KFI Studios Umage Shade Canopy

carving out **SPACE**

Offering flexible options is key in helping employees create their own oasis from the chaos—a designated spot for them to focus on their tasks at hand.

Desking can be light scale or a bit more substantial with built-in filing and storage options. Offering height-adjustable tables as a workspace solution is a great way to help employees prioritize their own health and wellness by keeping them active throughout their work day.

No matter the size of the footprint, there is a solution that will work for each individual need, and we can help!

Umage Cuna; and Magnuson Group
Ossa

comfort **DEFINED**

By definition, the “Home Office” combines elements of both work design and home design.

People’s homes say a lot about who they are. Each individual creates an environment for themselves and their families utilizing furniture and materials that appeal to their sense of aesthetics and the functionality they need to live comfortably. It’s no wonder, then, that employees would like to contribute to what their home office design should be. Giving them the options to truly express themselves and feel comfortable in their choices will go a long way in developing a happy and productive work environment.

PRODUCTS SHOWN

Global Adaptabilities, Spritz and Drift;
Claridge Motif; KFI Studios Umage Asteria;
Magnuson Group Axiane and Baldas

Complete the space with thoughtful design details and environmental improvements like monitor arms, charging solutions, and visual boards.
